Project Progress IV

Archana Kumari

Under the Guidance of
Dr. Pulak Mondal

15 February 2016

This work progress deals with how to read multiple frames of a particular video sequence. This was implemented with the following code in MATLAB:

```
clc
clear all
close all
srcFiles = dir('E:\foreman_10frames\*.pgm'); % the folder in which ur images exists

for j = 1 : length(srcFiles)
    filename = strcat('E:\foreman_10frames\',srcFiles(j).name);
    Im = imread(filename);
    figure, imshow(Im);
    str = num2str(j);
    h=strcat('frame number',str);
    title(h);
end
```
